

# HYDRO-DRAIN CLEANERS

**Fruit flies, gnats, or drain flies—whatever you want to call them, are a troubling problem year-round, but can be more severe during the hot weather months.**

If you don't control them at their source where they lay eggs, you could be faced with a major infestation.

Floor drains are a common area where insects breed and lay their eggs because of damp conditions. Hot water and chemical cleaning agents are often used to treat conditions, however, they don't really solve or eliminate the problem. Our Hydro-Drain Cleaners are efficient cleaning tools that go right to the source of the problem.

The Hydro-Drain Cleaner Standard is a rigid tube with a firm bristle with jet nozzles on one end and our Mini M70 nozzle on the other end. The firm tubing allows for more control over the cleaning process. Made from stainless steel, it is durable for most detergents and cleaning agents and can be used with ozonated water.

The Hydro-Flex Drain Cleaner utilizes a flexible heavy-duty extruded hose to provide the user with a more resilient option for drain pipes that are longer and curvy. Flexible hose has an inner spring for greater durability. A Mini M70 nozzle on one end and a jetted nozzle and bristle on the other end clears away debris and attacks nesting eggs without fail. Choice of a 39" or 96" length.

**Equipped with our lightweight Mini M70 Water Saver Spray Nozzle that efficiently forces water directly to the source and washes away debris and eggs and eliminates them.**

# HYDRO-DRAIN CLEANERS

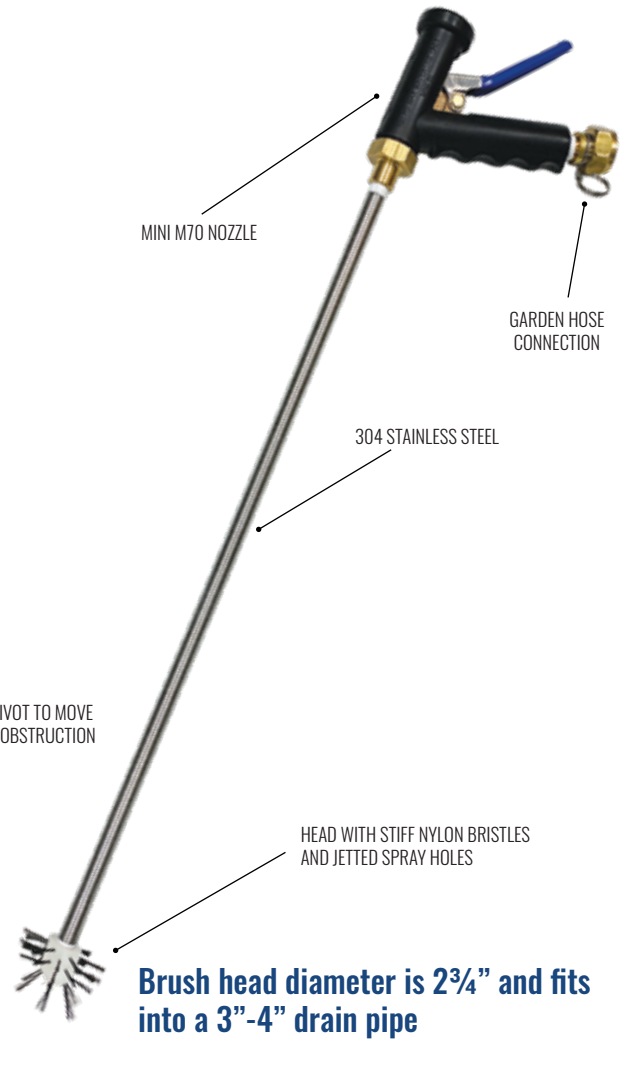

Our Mini M70 Heavy Duty Spray Nozzles provide a high velocity spray for a dramatic clean wash in floor drains, plumbing fixtures or bathroom fixtures. Both drain cleaners come with nozzle and brush heads.
